Remi Technology

Singapore FinTech Company
from **Bison Group**

- A Hong Kong Financial Holding Group

Remi Technology

- Build a blockchain-based payment network -- **Remi regulated stablecoin network ("Remi Network")**.
- Equip **banks and regulated financial institutions** with a comprehensive stablecoin infrastructure for highly **efficient, secure, compliant, and cost-effective cross-border transactions**.
- The Remi Network is **open stablecoin platform** that enables the issuance of various **compliant stablecoins** on its network.
- **Remi Regtech** empowers banks and regulators with blockchain- and AI-driven tools to **streamline KYC/AML processes** and ensure **seamless compliance**.

Bison Bank

- A **full- licensed Portuguese bank** with over 30 years of institutional history and **assets under management (AUM) exceeding €7 billion** — real balance sheet, real regulatory standing.
- **Europe's first bank-licensed digital asset service provider**
ECB-authorized under VASP: crypto-fiat exchange, crypto exchange, crypto transfer, crypto asset custody.
- In 2025, obtained ECB + Banco de Portugal approval to **issue regulated E-Money Tokens (EMT)** in **EUR (EUB)** and **USD (USB)** under **EU MiCA** — reclassified as CASP.

MiCA Regulation

- The Markets in Crypto-Assets (MiCA) Regulation **provides a unified legal framework for crypto-assets in the EU.**
- Two stablecoin categories:
 1. **E-Money Token (EMTs):** crypto-asset that purports to maintain a stable value by **referencing the value of one official currency.**
 2. Asset-Referenced Token (ARTs): crypto-asset (other than EMT) that maintains stable value by referencing other assets or rights.

Basel Prudential Treatment (SCO60)

- The Basel Committee has established the Prudential treatment of cryptoasset exposures (SCO60) to **define capital requirements for banks holding cryptoassets.**
- **Group 1b cryptoassets:** Stablecoins with a 1:1 peg to one official currency, redeemable at par value, and backed by high-quality reserve assets.
- Group 1b assets are **treated on the balance sheet in the same manner as their underlying traditional assets (e.g. cash or cash equivalents)** for capital and prudential purposes.

EU MiCA Basel SCO60 Bison EMTs

Bison E-Money Token (EMTs)

- Bison EMTs are **MiCA-compliant E-Money Tokens** issued by Bison Bank. They are **1:1 pegged to EUR (EUB) or USD (USB) fiat**, fully backed by high-quality reserve assets, and redeemable at par value.
- Bison EMTs qualify as Group 1b crypto assets under the Basel SCO60 and therefore will be **treated on the balance sheet in the same manner as cash or cash equivalents** for capital and prudential purposes.

Market for Regulated Stablecoins

By 2030, stablecoins are projected to settle **30%** of cross-border payment transactions.

Remi Solutions

- ❖ Remi Cross-border Payment
- ❖ Remi FX
- ❖ Innovations in Capital Market

Remi Cross-border Payment

Built on a blockchain-based infrastructure that enables seamless, efficient, and compliant transactions among financial institutions worldwide.

THE SWIFT CHAIN TODAY

- Total: \$30–100 in fees · 2–3 days
- No full-chain visibility · Compliance data arrives last

THE REMI WAY

	SWIFT	REMI
What moves	Message only	Travel rule message + Fund transfer
Compliance	Manual, after the fact	Embedded in every transaction
Visibility	None across the chain	Live — all parties, real time

Remi FX

THE PROBLEM

Every cross-border transaction touches a currency conversion. In the legacy system, that spread goes to the correspondent's FX desk — **not the originating institution, not the client's bank.**

The rail and the margin are owned by different parties. The institution moving the money **captures neither fully.**

No **direct FX between minor currencies**, and need to bridge with major currencies, like USD or EUR

BISON FX & TREASURY

SFC-Licensed · Hong Kong

7×24

Settlement

Zero

FX fluctuation risk

Direct

Minor currency pairs

Atomic

Rate locked at execution

THE REMI MODEL

REMI settles on stablecoin rails. Bison FX & Treasury — the Group's SFC-licensed markets division — handles the conversion

Originating institution settle directly with correspondent

No other intermediary taking a cut in between.

Settlement Fee
to REMI

&

FX Spread
to two counter-party banks

Two counter party banks share the FX spread, with Remi charge settlement fee

As corridor volume scales, every transaction contributes to a proprietary dataset on minor currency flows that no incumbent can replicate. The infrastructure generates the intelligence. The intelligence makes the infrastructure indispensable.

- **One-Stop Cross-Border Payment:** Enables seamless, real-time cross-border payment and FX in simpler transactions.
- **Direct FX between Minor Currencies:** Supports instant and direct conversion and settlement between minor currencies, without need to bridge with major currencies like USD or EUR .
- **Faster Execution & Efficiency:** Reduces FX processing time from days to seconds, boosts capital efficiency, enables 7x24 instant settlement
- **Zero FX Fluctuation Risk:** Locks spot rate at execution, eliminates exposure from lengthy processes, reduces volatility/hedging costs.

Innovations in Capital Market

Diversified & Efficient Stablecoin Liquidity Management for Return Optimization

Interbank Overnight Lending:

- **New Liquidity Management Tool:** Leveraging Remi's instant settlement, institutions conduct timely, low-cost overnight lending, optimize stablecoin positions with a new liquidity management tool.
- **Real-time settlement:** Enable banks to rebalance liquidity in real time.
- **Improve market access:** Offer small banks level playing field to interbank markets
- **Transparency on-chain:** Real-time visibility into system-wide liquidity and counterparty risk.
- **Programmable settlement:** Auto-enforces interest/principal repayment, reduce reliance on multiple legacy systems.
- **Better regulator's oversight:** Full real-time market data streamlines compliance.

Money Market Fund (MMF) – RWA Tokenization:

- **Liquidity & settlement:** 24/7 liquidity and real-time & automatic settlement of tokenized MMF units through Remi Network.
- **Easier collateralization:** Tokenized MMF units instantly pledged or unpledged as collateral on-chain for re-use.
- **Programmability & automation:** Banks can set automated liquidity trigger in smart contract.
- **Faster access to yield & redemption:** MMF usually calculates NAV once daily and process redemption with cutoff time, tokenized MMF with stablecoin rail makes redemption and payment instant and 24/7.

Long-term Bond & Short-term Debt– RWA Tokenization:

- **T+0 on-chain bond lifecycle:** Issue, trade, settle, pay interest/redeem bond instantly—full yield cycle in seconds.
- **Embedded KYC/AML in RWA tokens:** Verified tags enable compliant global trading.
- **Programmable RWA cash flows:** Auto-execute coupons and rollovers, transforming fixed income into dynamic yield-generating assets.

Holistic Bank-Grade KYC/AML Framework

Robust Data Protection Mechanisms

Patent Protection and Certification

Holistic Bank-Grade KYC/AML Framework

KYB Permissioned Network + Public Chain Base

Strict Onboarding Requirements

- Only banks and institutions with strict and robust KYC processes and requirements, rigorous internal control, and compliance management.

Whitelist Mechanism

- Network access is whitelist-only, based on scoring from unified on-chain and off-chain database

Public Chain – Open Infrastructure

- Long-term sustainability and trustless environment
- Massive scalability and high throughput, supporting huge parallel transaction processing
- Ultra-low transaction cost. i.e. SUI & Solana

Risk Control throughout Transaction Process

Travel Rule Enabled

- Travel-rule embed in each transaction going through Remi Network, strictly adhere to FATF revised standards.
- The Travel Rule automatically includes: Originating and beneficiary FI bank codes, transfer amount and currency, payer and receiver bank accounts, original bank reference number, and transaction remarks.

Pre & Post-Transaction Controls

- Sending / Beneficiary institutions can check score of the beneficiary / sending account through Remi before sending/accepting the transaction.

Audit and Compliance

- Remi automatically generates compliance report using transparent, tamper-proof audit on chain

Encryption Protection for Travel Rules Information

Asymmetric encryption algorithms are employed to encrypt information related to Travel Rules. The encryption process utilizes asymmetric cryptography, where the public key of the target bank is used for encryption.

This ensures that only the target bank holding the corresponding private key can decrypt the information, **achieving secure and directed transmission of data**.

Anti-Tampering Mechanism for On-Chain Information Transmission

Digital signatures and **smart contracts** are utilized to ensure that data originates from legitimate senders and to verify that the data has not been altered during transmission or storage.

This dual safeguard guarantees the **authenticity and integrity of the data**.

Secure Management of Encryption Keys

The generation, storage, and use of data encryption keys leverage **Multi-Party Computation (MPC) technology**. By splitting the key into "key shares" managed collectively by multiple participants, no single entity holds the complete key.

This approach **mitigates the risk of key leakage** and significantly **enhances the security of the key management system**.

Cross-Environment Data Transmission Access Control

By integrating **on-chain and off-chain whitelist mechanisms**, strict identity verification is enforced for addresses involved in data transmission. Only addresses included in the whitelist are authorized to initiate or receive data transmission requests.

This **restricts the scope of data flow** at the access source, **reducing the risk of unauthorized access**.

Robust Data Protection Mechanisms

*Fully compliant with major global data protection laws and regulations, including **GDPR (EU)**, **CCPA (US)**, and **PDPA (Singapore)**.*

Patents Protection

Covering US, EU, Hong Kong and Singapore

- ✓ *A monitoring and auditing tool of blockchain-based financial payment and clearing*
- ✓ *Inter-bank cross-border clearing and settlement system*
- ✓ *A secret secure management method and server side for cold wallets*
- ✓ *A risk monitoring method and system for stable coin transactions*
- ✓ *A stable coin trading system*

Remi

Security & Compliance

- ✓ **Dora certificate:** *Compliance with the European Union's Digital Operational Resilience Act (DORA), ensuring robust digital operational resilience against cyber threats and disruptions.*
- ✓ **SOC 2 Type II audits:** *Annual third-party audits*
- ✓ **ISO27001 certificate:** *Certified and periodically re-audited by accredited third-party auditors on a three-year certification cycle*

— Part Three ▶▶▶

- Smooth Integration
- Minimal Implementation Effort

Smooth Integration

SWIFT Compatibility

The Remi System is **compatible with the SWIFT protocol (ISO200222 & MT)**, enabling banks to seamlessly route transactions via SWIFT or Remi System directly.

Banks can **leverage their existing SWIFT infrastructure** while benefiting from the enhanced features of the Remi System, making the transition smooth and hassle free.

Seamless System Integration

Without altering the existing regulatory system and its processes, Remi can be **systematically integrated with the bank's existing systems**, including teller systems, clearing and settlement systems, risk control systems and anti-money laundering (AML) systems.

Minimal Implementation Effort

Development Investment

Minimal IT investment from the bank side

Quick Implementation

implementation generally completed within **6-8 weeks***, including 2-week business trial, ensuring swift and seamless integration into legacy systems without disrupting ongoing operations.

Implementation Concerns	Required Efforts	Details
Hiring Additional Technical Staff?	No	Remi's plug-and-play API and ISO 20022 compatibility allow integration using existing IT teams.
Adding New Compliance Team?	No	Built-in bank-grade KYC/AML, Travel Rule automation, and on-chain audit trails align with existing protocols.
Adjustments to Existing Internal Controls, Risk Management, and Audit Procedures?	No	Immutable on-chain records auto-generate compliance reports, aligning with existing internal controls and reducing manual reconciliation.
Costs for Adjusting Existing Business and Operational Processes	Minimal	Seamless compatibility with core banking systems ensures minimal disruption to existing workflows.
Staff Training Costs	Minimal	1-2 sessions; no new skills required.

* Note: Subject to local regulatory requirements and bank's existing infrastructure, etc.

- Frozen detail

Liquidity Monitoring

- 24H exchange rate
- Exchange amount

Real-Time Regulatory Intervention

Regulatory authority is able to query the risk factors, risk categories, transaction details, risk report of the addresses of the designated financial institution or single on-chain address.

Regulatory authority is able to **freeze or request information** of the addresses of the designated financial institution or single on-chain address.

Funds Freeze & Recovery Protection

Remi equips regulated financial institutions with a **secure, compliant and auditable mechanism to temporarily suspend or restrict transactions** on specific addresses in cases of fraud, theft, account compromise, money laundering, sanctions violations or other suspicious activities.

Key Functions

- **Instant address freezing** (full, partial, inbound-only or outbound-only)
- **Temporary suspension of fund movements** to enable investigation
- **Controlled burn-and-remint for traceable stolen assets** (only recovered amounts are reminted)

Execution Process

1. Formal request from authorized Law Enforcement Agency (LEA) or Remi member
2. Bison Bank compliance & legal team conducts authenticity and legality review
3. Internal approval obtained per policy
4. Remi executes smart contract blacklist function to freeze the address
5. Continuous monitoring and coordination with authorities during freeze period
6. Upon official instruction: immediate unfreeze or burn-and-remint with full immutable audit trail

Core Advantages

- **Rapid Response & Asset Protection:** Enables immediate suspension of suspicious transactions, providing critical time for investigation and minimizing financial loss.
- **Effective Recovery Mechanism:** In theft cases, traceable assets can be burned and equivalent amounts reminted, supporting potential fund recovery without arbitrary issuance.
- **Full Regulatory Compliance:** All actions are conducted under strict legal and supervisory oversight, with complete tamper-proof audit records.
- **Enhanced Client Trust & Bank Reputation:** Demonstrates strong risk management capabilities, increasing confidence among customers and regulators.
- **Operational Flexibility & Control:** Supports various freeze levels to balance security and business continuity without disrupting normal operations.
